EDUCATION

New Jersey Institute of Technology

Newark, NJ

Bachelor of Science in Computer Science

Sept. 2022 - Aug. 2025

Relevant Coursework: Data Structures & Algorithms, Database Systems, Operating Systems, Software Engineering

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, Java, C/C++, SQL, R, PHP

Frameworks & Libraries: React, Next.js, FastAPI, Django, scikit-learn, GraphQL, Apollo Server

Data & Visualization: Pandas, NumPy, Matplotlib, Tableau, Seaborn

Infrastructure: AWS, MongoDB, Docker, PostgreSQL, MariaDB, Redis, Git, Github Actions

Methodologies: Agile/Scrum, Test-Driven Development, CI/CD, Load Testing

EXPERIENCE

B The Cause

June 2025 - Aug. 2025

Backend Software Engineer Intern

Newark, NJ

- Led backend and database development in cross-functional team of 4 engineers, building REST API backend using Laravel (PHP) that powers AI-driven education platform that identifies learning gaps, and generates personalized intervention recommendations.
- Optimized MariaDB database queries and implemented strategic indexing, reducing dashboard load times and improving UI responsiveness for student progress tracking and assessment delivery features.
- Delivered 8 production features in 10 weeks including student progress dashboard and assessment builder, writing comprehensive unit and integration tests that caught critical data loading bugs before deployment.

New Jersey Institute of Technology

Jan. 2024 - May 2024

Undergraduate Research Assistant

Newark, NJ

- Engineered automated ETL pipeline using Python and Pandas to process 10K+ athlete training records across football, soccer, and basketball programs, reducing manual data preparation from 8 hours to 15 minutes per dataset.
- Analyzed ACL and Achilles injury patterns using PostgreSQL queries and statistical analysis, identifying correlations between injury risk and factors including game schedule congestion, mileage, playing time, and recovery intervals.
- Developed data visualizations revealing injury rate differences and declining recovery times over 3 seasons, providing evidence-based insights that informed athletic training staff decisions.

PROJECTS

Job Application Intelligence Platform | Repository | Website

Django, React, PostgreSQL, Auth0, OpenAI API

- Built full-stack platform with Django REST Framework and React featuring OAuth 2.0 authentication, resume parsing (PDF/DOCX), GPT-4 API integration for job-tailored content generation, and multi-format export, serving 30+ users in production.

GraphQL Data Platform with Advanced Caching | Repository

TypeScript, GraphQL, PostgreSQL, Redis, Docker, Apollo Server

- Engineered GraphQL API serving player records and statistics across 7 seasons of European soccer data, implementing PostgreSQL schema and DataLoader batching achieving sub-100ms query response times.
- Designed data access layer with Redis caching (85% hit rate) and strategic indexing, achieving 70% reduction in database load during load testing with 100+ concurrent requests.

Fantasy Football AI GM Assistant | Repository | Website

Next.js, TypeScript, Python, FastAPI, Redis, LLM(GPT-4)

- Built data pipeline integrating ESPN API with FastAPI backend and PostgreSQL database, implementing Redis caching layer that reduced redundant API calls by 85% through intelligent query deduplication.
- Designed LLM-powered recommendation engine using GPT-4 API to analyze roster composition against league averages, generating contextual trade suggestions and lineup optimizations with statistical explanations.

Sports Data Analytics Repository | Repository

Python, R, scikit-learn, Tableau, GitHub Actions

- Built end-to-end analytics pipeline with automated ETL workflows, visualizations (shot charts, heatmaps, radar plots), and machine learning models for NBA/soccer data from multiple leagues and seasons.
- Developed predictive models (random forest, lasso regression) and clustering algorithms to identify team performance patterns, player archetypes, and tactical playing styles across 450+ players and 100+ teams.
